Political Economy and Contemporary Capitalism Radical Perspectives on Economic Theory and Policy

Editors: Ron Baiman, Roosevelt University (Chicago)
Heather Boushey, New York City Housing Authority
Dawn Saunders, University of Vermont

Political Economy and Contemporary Capitalism provides relief from the standard fare in economics that what's good for Wall Street is good for the world. It challenges readers to develop critical perspectives on a number of current topics including foreign financial crises, health care, social security, and welfare reform, while at the same time demonstrating the variety of heterodox (alternative) approaches available to economic inquiry.

With contributions by some of the top heterodox economists of our time, such as Ellen Mutari, Edward J. Nell, Robert Pollin, and Max Sawicky, this book explores alternative approaches to theoretical method, macro- and micro-economics, international trade and finance, economic development, and related policy issues. *Political Economy and Contemporary Capitalism* provides both academics and students of economics with a full understanding of the latest work in heterodox research.
